***Response to Arguments***

Applicant's arguments, see Amendment, filed 6/21/05, with respect to claims 1, 3-10, 13,16, and 18 have been fully considered and are persuasive. The rejection of these claims has been withdrawn.

***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

'The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.'

Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim depends from a canceled claim.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 23, 24, 28 and 32 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by US 6,827,999.

The reference discloses an optical recording medium comprising a substrate, a first dielectric layer, a recording layer, a second dielectric layer, a third dielectric layer, a reflective layer and an outer protective resin layer. The third dielectric layer serves as a sulfuration-inhibiting layer (See col. 6,

line 39). The third dielectric layer is formed of an SiC/SiO<sub>2</sub> material where the material are present in a 50/50 mole ratio (See Example 1 and col. 6). The third dielectric layer is formed in a thickness of 2-8 nm (See Example 1 and col. 6). The substrate has a wobble groove thereon which has the claimed track pitch, depth and width (See Example 1).

***Allowable Subject Matter***

Claims 1, 3-10, 13, 15, 16, 18-22 are allowed.

Claims 25-27 and 29-31 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The claims are indicated allowable because the prior art does not teach or suggest an optical recording medium comprising a substrate, a first dielectric layer, a recording layer, a second dielectric layer, and an interface layer at least between one of the dielectric layers and the recording layer where the interface layer comprises the material as claimed in claim 22 or a medium comprising a substrate, a first dielectric layer, a recording layer, a second dielectric layer, a sulfuration-inhibiting layer, a reflective layer, and a protective layer where an interface layer is formed at least between the first or second dielectric layers and the recording layer.
